

***RECYCLED STEEL CONTENT OF O'HAGIN'S FINISHED PRODUCTS
MANUFACTURED FROM 26-GAUGE G90 STEEL***

O'Hagin has received numerous inquiries regarding the amount of recycled content in our finished products manufactured from 26-gauge, G90 Steel.

With respect to those products, we hope that this memorandum is informative.

O'Hagin produces galvanized steel products using 26-Gauge, G-90 Steel. Those finished products contain, approximately, 33% - 37% of recycled steel content. Post-consumer recycled content is approximately 19.8% and pre-consumer recycled content is approximately 14.4%. These figures are based on information published in October 2012 by the Steel Recycling Institute.

We encourage our customers to contact us directly for assistance when using this information in order to submit requests for compliance with any LEED or other program.

Finally, more detailed information on recycled content in steel products, generally, is available at the website for the Steel Institute: www.recycle-steel.org.
